EXPERIENCE QUALITY:

The ISRI® 6000/575 is a comfort driver's seat for construction machines. It is of extraordinary quality and extremely robust. The mechanical suspension system contains an optimised vibration isolation according to ISO 7096 class 3 and 4 (valid for drawing no. 88199). Due to additional reinforcements all current DIN and EN safety requirements for construction machines were fulfilled. The variety of individual adjustment movements as well as the standard height and rake adjustment in relation with anatomically shaped seat and backrest cushions, will ensure driving without becoming tired. All seats are equipped with an extremely robust and durable fabric.
